

1 **ABSTRACT OF THE DISCLOSURE**

2 A detachable lampshade includes an upper ring and a lower ring parallel
3 to each other. Multiple shades are made of a resilient material and are bent
4 outside the upper ring and the lower ring. Each shade has two rods respectively
5 provided at two sides thereof. A plurality of tubes is provided between the upper
6 ring and the lower ring. Each tube has a channel longitudinally defined through
7 an outer periphery of the tube. An upper slot and a lower slot are transversally
8 defined at a diametrically opposite side of the channel for respectively locating
9 the upper ring and the lower ring. The adjacent rods are received in the
10 respective tubes through the channels and positioned between the upper ring and
11 the respective upper slots, and between the lower ring and the respective lower
12 slots.
